

By professionals, for professionals! Plus points by the metre!

- ⊕ Enormous saving of working time, as it can be processed quickly without tools
- ⊕ Handy roll format – simply unroll, stick and cut
- ⊕ Time-saving, as there is no interruption of work/curing times
- ⊕ Bitumen-free and environmentally friendly
- ⊕ High-quality pure aluminium sealing tape, universally applicable on almost all surfaces
- ⊕ Waterproof and temperature-resistant, no cracks
- ⊕ High adhesive strength, high tear resistance
- ⊕ Processing safety, good long-term behaviour
- ⊕ Clean to process, precisely cut to size with conventional scissors
- ⊕ Prevents penetration of soil, roots, water, etc.
- ⊕ Increased stability of the construction
- ⊕ Permanently attractive appearance, unseen from the visible side

Saves an enormous amount of time!

Totally free of bitumen!

Reliably tight!

Best technology for simply good results!

The sealing adhesive tape consists of several layers: The pure aluminium is UV-resistant and has good mechanical stability due to the pad foil.

Technical data

Material:	Pure aluminium 70 µ, lacquered; Pad foil with butyl rubber
Properties:	Long-term stability resistant to aging, weathering and UV
Colours:	Concrete grey
Dimensions:	100 mm
Roll length:	10 m
Total material thickness:	1 mm according to DIN 1849-1
Building material class:	B2, normal flame retardant DIN 4102
Application temperature:	+5 °C to +30 °C
Temperature resistance:	-40 °C to +100 °C

Gala-Quick – the quick & clean sealing tape for Gala construction elements

- ⊕ Pure aluminium 70 µ!
- ⊕ Absolutely bitumen-free!
- ⊕ Fast processing!
- ⊕ Simply professional!

Effective. Easy. Beautiful!

The joint for
Gala construction
elements!

Permanently beautiful appearance,
unseen from the visible side.

No bitumen! No spatula work!
No dirty tools!
No unclean joints. No hazardous waste!

The Quick Quick & Clean sealing tape made of pure aluminium is quick and clean to bond thanks to its clever simplicity.

Simply unroll, shorten to length and press on Finished!

Bed edgings, raised beds, terrace fastenings – used construction elements such as cross members, steles or palisades should be closed from the inside.

UNTIL NOW

Up to now, bitumen levelling compounds have been used for this purpose, among other things, which have many disadvantages: Cumbersome processing, dirty tools, high expenditure of time and annoying work interruptions. Due to the required drying time of the bitumen mass, the work can only be continued after approx. 1 day. The bitumen buckets must be disposed of as hazardous waste. A further disadvantage: over time, bitumen forms hairline cracks due to temperature changes and environmental influences. The construction becomes leaky, the stability is reduced. Unclean bitumen joints are an unwelcome sight.

TODAY

Today, Gala-Quick quickly produces results worth seeing. Everything you need is provided by Gala-Quick clean on a roll. In just a few steps, the self-adhesive, environmentally friendly pure aluminium sealing tape seals the joints between components that are standing together. Angle supports, steles, traverses, L-bricks etc. are immediately sealed safely and permanently. Earth, gravel and sand remain in the bed and the joints remain clean. The appearance of the front sides is convincing with its flawless aesthetics, while the rears are also impressive.

Gala-Quick quick & clean sealing tape. **One, two, three – perfectly laid!**

FIRSTLY

Clean soil etc. off the concrete back of the construction elements and pre-treat with primer if necessary.

SECONDLY

Position Gala-Quick roll, roll out from bottom to top, press on and cut to size.

THIRDLY

Backfill the soil.
Finished!

Application: The cross members were placed on the side of the pavement as a border to the bed and designed with soil, bark mulch and plants. The inside of the cross members were closed up to the edge of the bed with Gala-Quick. This prevents rainwater, soil, etc. from soiling the pavement and roots or weeds from growing through the gaps. The appearance is always clean and neat.

Application raised bed: Filled with stones and earth – the cross members were closed from the inside with Gala-Quick.
